Boom Lifts

Boom Lifts Training Moose Jaw - Boom lifts are equipment that has a platform that may be lowered or raised to various heights, thus making this piece of equipment an important requirement in a wide range of professions. Accessible in many different specialized kinds such as aerial hoists, scissor lift trucks, and knuckle boom lifts, each type functions very specifically.

Aerial hoists are most normally utilized to transport people at skiing lodges who are not at ease with a snowboard lift. These platform lifts operate very similar to an elevator, snowboarders can be slowly but surely shuffled up the mountain, stopping at stations along the route until they arrive at the top. Aerial hoists are also used in construction, transporting workers securely up and down the sides of multi-level construction sites.

Scissor hoists are also in the boom jack category. They are utilized normally by service companies as an ideal system to allow staff to complete upkeep and repair on wires and cables that are attached to poles. Phone, cable television and power corporations have relied on the efficiency of this kind of boom jack for years.

The knuckle boom lift is made for use within areas of uneven terrain and where the need to change course may be necessary. This kind of boom jack has the capability to fit in tight spots where a scissor jack cannot fit. Working between multiple machines in a production facility or in near proximity stuck between two walls, the knuckle boom also features a standard platform equipped with rails for protection and worker safety.

Based on the work requirements and the sort of work to be completed will establish the proper model of boom lift to decide on. Fortunately, there is a version suitable for practically any function.
