Hyster Forklift

Hyster Forklift Training Moose Jaw - Hyster is globally known as an industry leader in the lift truck producing business. However, it began as a manufacturer of lifting machinery and winches. Most of its production was concentrated in the Pacific Northwest and dealt primarily with the wood and logging industry. A couple years after the 1st forklift trucks were invented Hyster became synonymous with quality manufacturing. Over the preceding eighty years Hyster has continued to get bigger and increase its product line. The expansion of its products coupled with its desire to stay service oriented has allowed Hyster to grow into the intercontinental player it is in our day.

In the period between 1940 and 1960, Hyster sustained its growth throughout the western world. In 1946, Hyster opened a plant in Illinois that was completely devoted to bulk producing trucks. This allowed Hyster to drive its expenses down and, at the same time, offer a better quality product at industry competitive prices. In 1952, Hyster began its first foray in to the international production market through opening its first plant in the Netherlands. The Netherlands plant was originally designed to produce two products: Hyster 40" and the Karry Kranes.

Between the late fifties through the 60's, Hyster continued to expand into new markets. They started building container handlers in the United states in 1959 to satisfy the ever growing demand for transportation goods. In 1966, Hyster developed a method for allowing a lift truck to go both forward and backwards using the same pedal. This pedal was labeled the Monotrol pedal, which revolutionized the industry. Later on in the decade Hyster opened a R&D centre in Oregon that was concentrated on improving the design and functionality of lift trucks. The centre is still one of the world's top testing facilities in the materials handling industry.

As demand for materials handling equipment continued to expand rapidly throughout the 60's, Hyster considered it necessary to reorient its focus towards these new mass markets. Thus, in 1970, the XL design philosophy was born. The XL design philosophy allowed Hyster to supply superior quality at a more inexpensive price. A further expansion in production capabilities was necessitated by the need in Europe for Internal Combustion Engine Trucks. To plug this hole, a plant in Craigavon, Ireland was opened in 1980. Through the 1980's Hyster continued to focus on developing industry leading lift trucks. The Hyster brand name was recognized throughout the globe for its dedication towards quality. This attention to excellence brought many suitors for the business. In 1989, a large multinational company based in Ohio called NACCO Industries bought Hyster and started an aggressive expansion strategy. NACCO rapidly replaced the XL philosophy with a more driver oriented truck that focused on operator comfort, which is well-known as the XM generation of trucks.

With the global shift towards just-in-time management methods, Hyster has been required to keep up with the trends through investment in new and diverse technologies. Acquisitions and investments were made in the US, Italy, Netherlands, and countless other places all over the globe. All of these investments have made Hyster a worldwide leader in the lift truck market. In 2009, Hyster celebrated its eightieth anniversary as an industry leader of materials handling equipment, which consists of over 300 different styles of forklift trucks.
