## **Moose Jaw Manlift Certification**

Moose Jaw Manlift Certification - The Manlifts and Elevated Platforms program offers training on the regulations, rules and correct application of safe operating measures and work practices included in everyday activities for those who work with this machine. The program has been designed for individuals who are actively involved in these activities or individuals who have a basic understanding of this machine.

In the last couple of decades, manlifts and aerial platforms have become a common sight on construction job sites and in industrial maintenance applications. These machinery provide an easy way to lift employees close to what should be done on a stable platform apparatus, allowing workers to perform tasks with greater comfort and safety rather than being perched on top of scaffolding or ladders.

The manlift is similar to other industrial devices in that they are safe if utilized correctly. Because they lift staff above floor or ground level, accidents can occur easily and this could result in serious fatalities or injuries for both the manlift operators as well as whoever passerby who might be unlucky enough to be standing beneath.

There are various kinds of manlifts. Nearly all fall into 1 of 2 categories: the articulating boom lift, that has the capability of both horizontal and vertical movement and the scissors lift, which is capable of moving up and down.

## Protecting Employees

It is essential to offer correct training for you operators. A lot of businesses that lease these machines will provide on site training. Each worker who would be working on the equipment or operating it needs to receive training in safe operations. It is likewise important that just those workers who have received training must be authorized to operate the controls. Communication rules and operating procedures must be clear. Therefore, workers on the ground must not operate controls without the knowledge and approval of any staff inside the basket.

The workers that occupy the basket will be required to wear the proper fall protection gear which includes a harness and lanyard. The fall protection attaches to the manlift easily. The worker should make sure that he or she has made whichever adjustments required to reflect the change in fall distance if the height of the work area changes.

To make sure that the manlift is in good operating condition, manlifts should be inspected and tested each and every day. Prior to utilizing the equipment, whichever defects should be re-inspected and fixed.
